# BUILD A DESKTOP TO-DO APP WITH ELECTRON JS

# ABOUT THE ASSEMBLY

- **A Smart lab based out of in5 since December 2014.**
- **Over 200 Free workshops done.**
- **Assembly : HACK - Embedded systems, IOT and hardware.**
- **Assembly : CODE - Software projects - APIs, frameworks, apps.**
- **Age range: 16 to 60 – Students | Professionals | Entrepreneurs.**
- **Focus on Smart Technology and Practical applications.**
- **Forum: [members.theassembly.ae](https://members.theassembly.ae)**

# ABOUT THE ASSEMBLY

# WHAT IS ELECTRON?

- Open source framework to create desktop apps using web dev technology (HTML/CSS/JS)
- Developed by GitHub in 2013 for the Atom code editor project
- Built on top of Chromium and Node.js
- Cross-platform: works with Windows/Linux/Mac
- Can set up application/context menus, auto-update, debug and handle crash reports

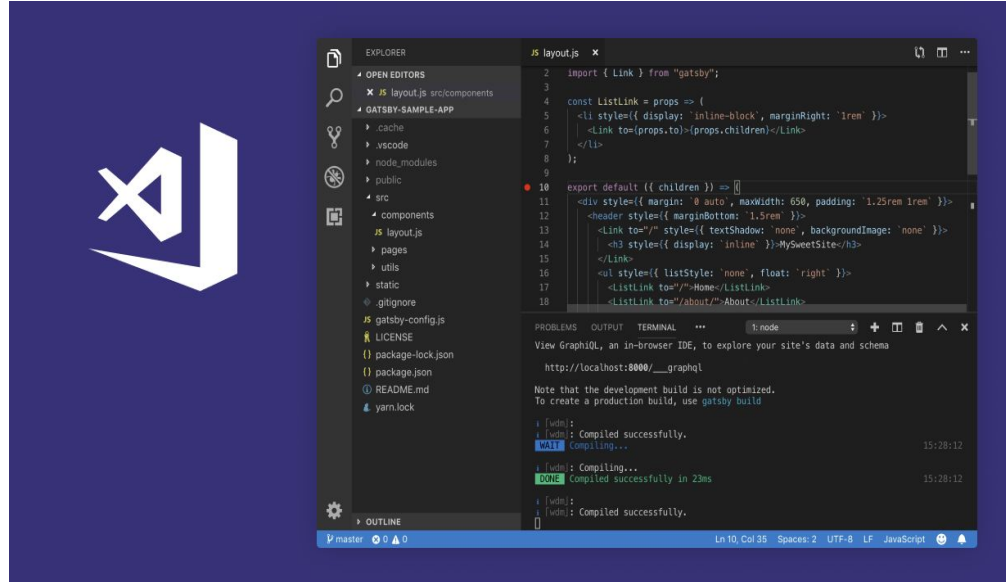

# APPS MADE USING ELECTRON

COMMUNITY  
INNOVATION  
WORKSPACE

<https://electronjs.org/apps>

## NODE JS

- Asynchronous event-driven JavaScript runtime

## CHROMIUM

- Google's open source web browser project.
- Minimalist user interface.

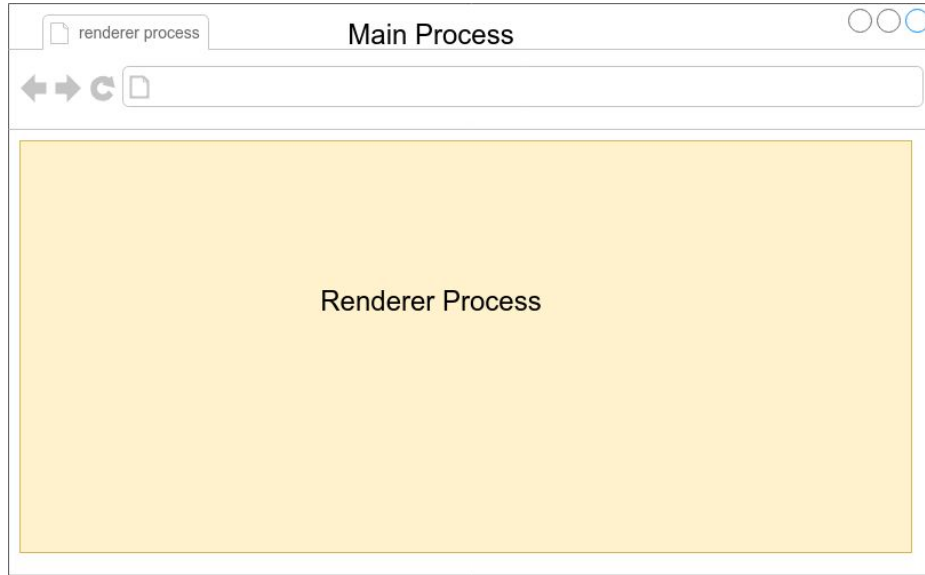

# ELECTRON CORE

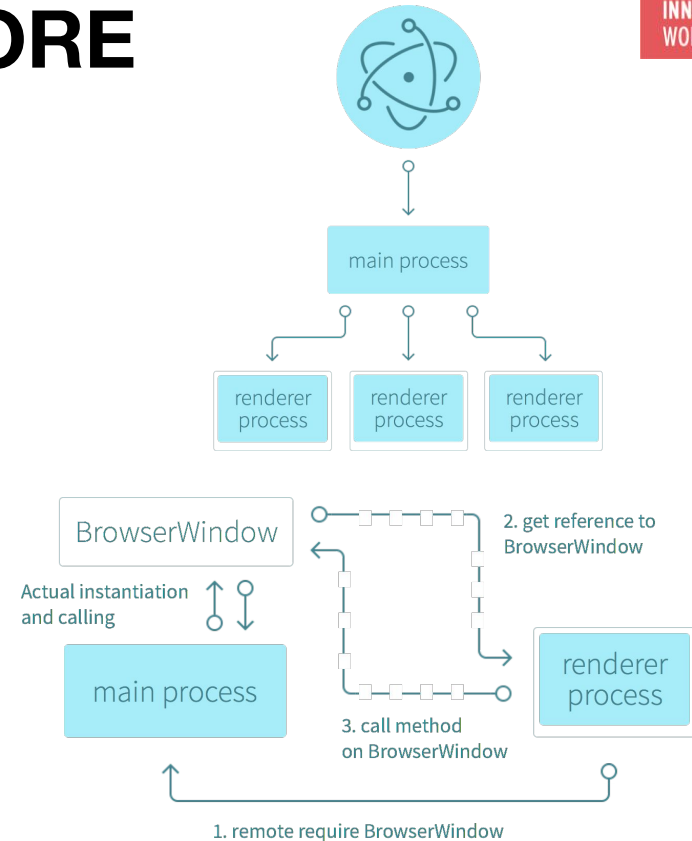

Main Process	Renderer Process
<ul style="list-style-type: none"><li>- Only one</li><li>- Serves as entry point to application</li><li>- Access to Full Node API</li><li>- Access to Native Functionality eg; creating menus, notifications, triggering updates</li></ul>	<ul style="list-style-type: none"><li>- Each is a new browser window</li><li>- Multiple allowed</li><li>- Can be hidden in background</li><li>- Each browser window has separate process</li><li>- Some functions only possible by communicating to main process</li></ul>

# ELECTRON CORE

## PROCESSES IN CHROMIUM TERMS

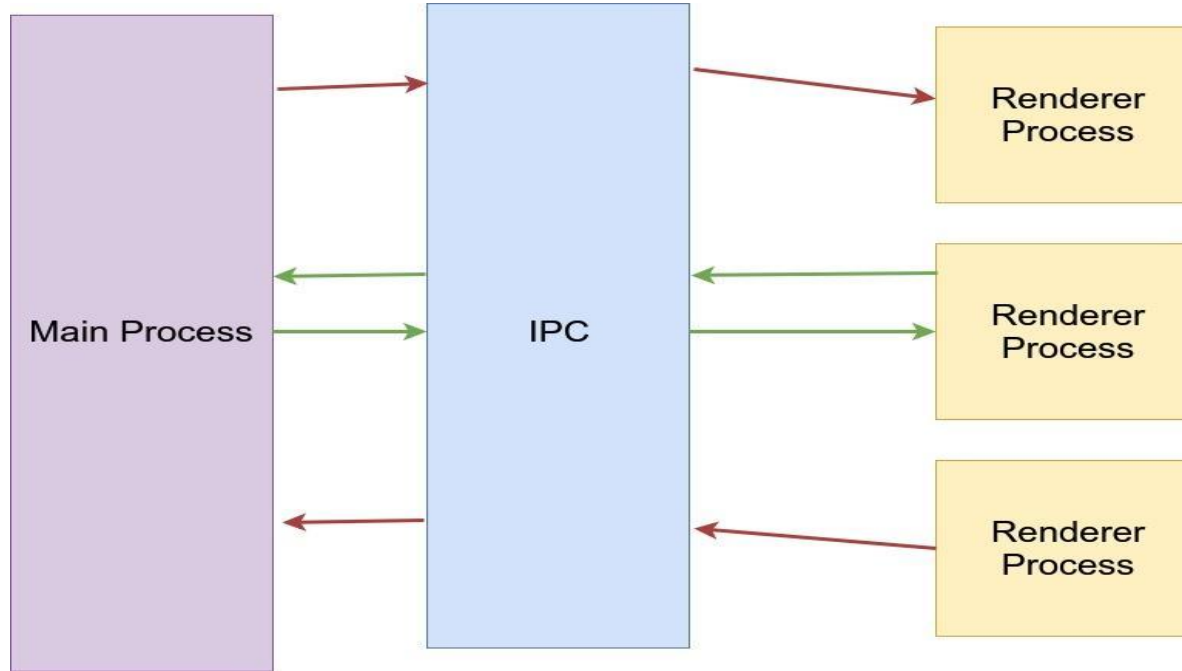

# EVENTS

- Contained in **app** object
  - 'will-finish-launching'
  - 'ready'
  - 'window-all-closed'
  - 'before-quit'
  - 'quit'
  - 'open-file'
  - 'browser-window-created'/'browser-window-focus'
  - 'login'
  - Full list at <https://electronjs.org/docs/api/app>

# INTER PROCESS COMMUNICATION

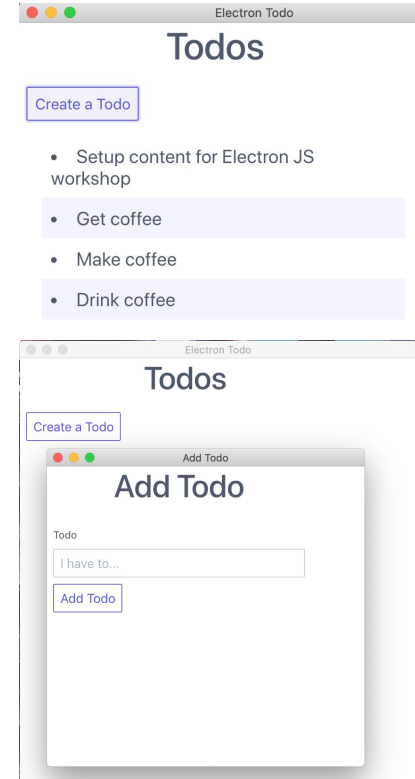

# REPOSITORIES

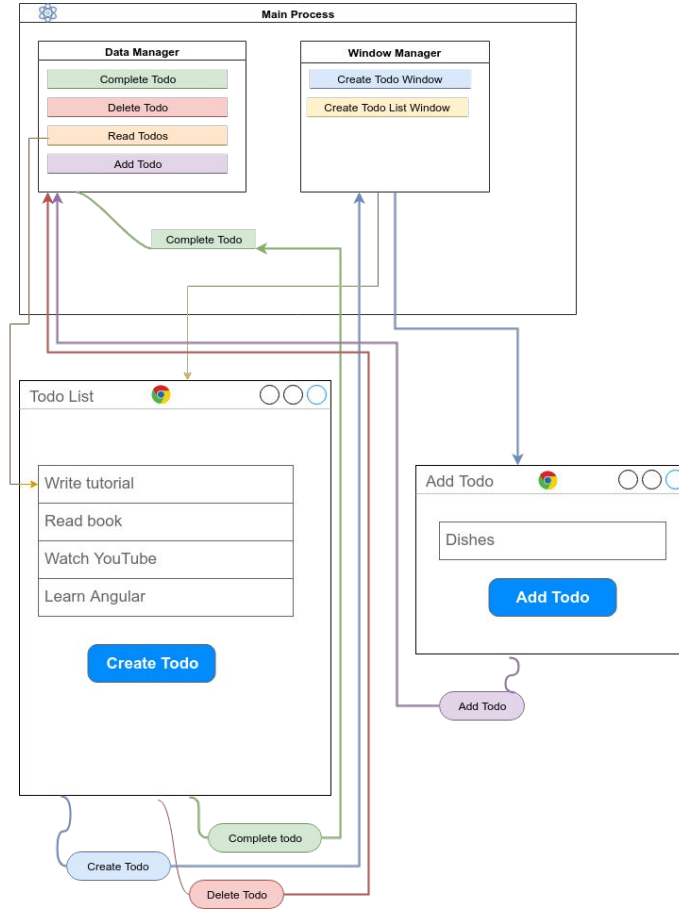

- Electron API Demos  
<https://github.com/electron/electron-api-demos>
- Our App <https://github.com/The-Assembly/ElectronToDoApp>
- Acknowledgement - This is based on work originally published on CodeBurst by **CodeDraken**

# THE TO DO APP

1. Our app will have a main page that contains a list of task and a create button
2. The create button will open an 'Add Todo' window - here we specify our new tasks
3. Once we add the task from the 'Add Todo' window, it will close and update main list
4. Tasks can be deleted from the main list by clicking on them
5. Data is persisted even when app is closed

# Let's get started.
